Given the following model and temporal formula:
(1) Model $M = (S, R, L)$
   where $S = \{s1, s2, s3, s4\}$
   $R = \{(s1, s2), (s2, s3), (s3, s2), (s4, s4)\}$
   $L = \{s1 \mapsto \{p\}, s2 \mapsto \{p\}, s3 \mapsto \{p, q\}, s4 \mapsto \{q\}\}$
(2) Temporal formula $f = p \land E(p \lor q)$

Show the steps of symbolic model checking including
(1) the OBDDs for $M$, $p$, and $q$,
(2) the OBDDs during the calculations of model checking.
