

## **Module 1e: Sample Queries**

### **Objective:**

To practice and to improve query design experience with sample databases.

### **Topics:**

- Sample relational algebra queries (premiere, company, employeetraining, division)
- Sample SQL queries (update queries, simple retrieval, multitable queries, advanced queries)
- Common mistakes in query design

### **Task:**

Test each query introduced in the video and learn how the queries are structured. Use WinRDBI (for relational algebra queries) and xampp (for SQL queries). Repetitive exposure to these queries will improve your database experience.

### **Assessment:**

Query experience will be tested in quizzes, projects and exams.
