

Module 11: Constraints

Objective:

To understand how the DBMS enforces database integrity through several types of constraints.

Topics:

- entity integrity constraint
- referential integrity constraint
- legal values (check clause) constraint
- specification of primary key and foreign key

Task:

Review the SQL script for each of the sample databases and notice how the constraints are specified (see xampp\htdocs\course\scripts\ folder).

Assessment:

This knowledge will be tested in quizzes and exams.
