

CIS-4911 Senior Project

Course Change Justification

Senior project should be taken during the semester in which the student completes all the CS courses required for the CS major. However, students may enroll in several CS courses and Senior Project during the last semester. For a successful senior project completion, students must have completed CEN-4010 (Software Engineering).

The present “Prereq: Permission of the Senior Project Coordinator” as in the left flowchart (present curriculum model) may still enable some students to take Senior Project along with courses that must be taken prior to Senior Project. Therefore, this proposal specifies explicitly that students must complete these essential courses before enrolling in Senior Project as “Prereq: CEN 4010 and Permission of the Senior Project Coordinator” as shown in the right flowchart (restructured new curriculum model) below.

This course change will enable students will increase the successful completion of Senior Projects.
