

COP-4813 Web Application Programming

Course Change Justification

Fifteen years back, when COP-4813 was created, Visual Basic programming was a requirement for this course and the prerequisite included COP-4005.

After the introduction of .NET framework, this course no longer requires Visual Basic skills. Students can enroll in COP-4813 without taking COP 4005. Hence, this prerequisite change for COP-4813 will improve the graduation rate.
